DETAILED ACTION

Claim Objections

Claim 1 is objected to because of the following informalities: In amended claim 1, applicant uses the transitional phrase "comprising of" which is not a proper transitional phrase. Applicant is advised to review MPEP 2111.03 for acceptable transitional phrases. Appropriate correction is required.

Claims 2-4, have been referenced by the status identifier "Withdrawn" but they should be referenced by the status identifier "Canceled". Appropriate correction is required.

For purposes of this office action the examiner is treating the claims as canceled.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-9 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The preamble of claims 5-9 are not consistent with the independent claim 1, which recites "a tile cutting attachment...comprising...". The relationship between the independent and dependent claims is not clear.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,6,8 are rejected under 35 U.S.C. 102(b) as being anticipated by 4,480,952 to Jeremias. Jeremias discloses a cutting attachment having a shaft (12) and a tip (30) for engaging the workpiece; the tip having six cutting edges (fig 3); each edge provided with a clearance angle (col. 2 lines 50-51); tip angle of 90 degrees (col. 2 lines 36-38); the point angle and relief angle should form a central point on the head of the tip (fig 4); the bit has an active diameter (fig 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5,7,9 are rejected under 35 U.S.C. 103(a) as being unpatentable over 4,480,952 to Jeremias. Jeremias discloses all of the elements of the claims but for the specific relief angle recited in claim 5, the specific overall angle recited in claim 7 and the material recited in claim 9. In that Jeremias discloses having a relief angle and applicant has provides no criticality to the specific angle disclosed, it would have been

Art Unit: 3722

obvious to one having ordinary skill in the art at the time the invention was made to alter the value of the relief angle since discovering optimum ranges or values involves only routine skill in the art. Similarly with the overall angles of the secondary cutting edges, Jeremias discloses that edges 32,34 have an angle of preferably 40 degrees although angles from 60-15 degrees can be used. In that 30 degrees (which is claimed) falls within this range, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have secondary cutting edges of 30 degrees for the purpose of having improved cutting.

Regarding the material used for the cutting tip. It is well known to make cutting tips out of tungsten carbide, therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to make the tip of Jeremias out of tungsten carbide, especially since applicant provides no criticality for the use of this material (page 3 of specification list this material as one possible alternative).

Response to Arguments

Applicant's arguments filed 7/16/2007 have been fully considered but they are not persuasive.

The examiner maintains the art rejections of Jeremias, which discloses the cutting tool as claimed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 3722

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
